Guardian AI

An AI assistant for your computer

A small floating icon stays on your screen

It watches while you work

What Problem Does It Solve?

People make mistakes while working

Mistakes are sometimes noticed too late

Finding the problem can take a lot of time

Guardian AI helps notice problems early

Made with GAMMA

How Guardian AI Works

01

It observes the screen

02

It understands what the user is doing

03

It detects possible problems

04

It alerts the user immediately

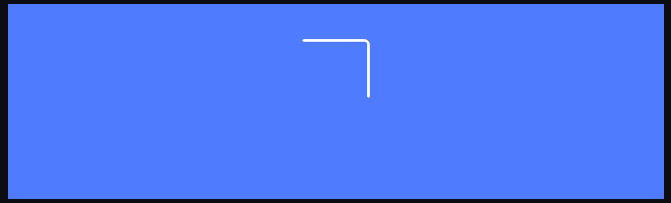

Made with GAMMA

What Happens When It Finds a Mistake?

1	2	3	4
The icon shows an alert	AI tells you what is wrong	AI explains why it is wrong	AI gives the correct solution

Made with GAMMA

The Floating AI Icon

The icon stays in the corner of the screen

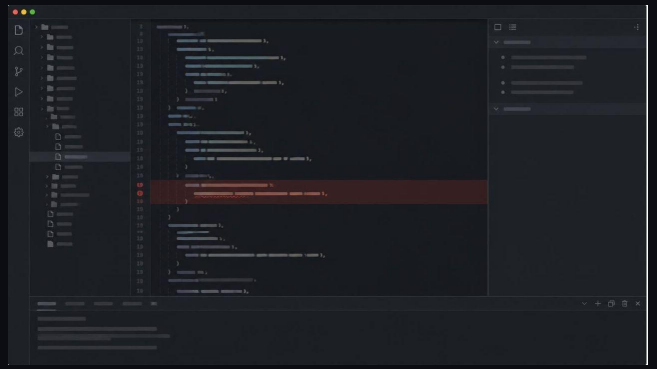

Green = Everything is OK

Yellow = Possible problem

Red = Problem detected

Click the icon to see details

Example: Coding

01	02	03	04
User writes code	Guardian AI detects an error	It explains the error	It gives the corrected solution

05

It can check the result again

More Than Coding

Websites

Documents

Excel and spreadsheets

Design

Study and research

Other computer tasks

Made with GAMMA

What Makes Guardian AI Different?

01

It works while you are working

02

It does not only find mistakes

03

It explains the problem

04

It gives a solution

05

It checks the result again

Made with GAMMA

User Stays in Control

AI suggests what to do

User decides what to apply

AI checks the result after the change

Important actions need permission

Made with GAMMA

Our Vision

01 One AI guardian for many computer tasks

02 Detect problems in real time

03 Give clear solutions

04 Help people work with fewer mistakes

05 **Make Guardian AI a useful everyday computer assistant**
